EXPERIENCE

Software Engineer
Jul 2023 – Present

Citibank • Pune, India

- Backend engineer for **Tradelink**, a front/back-office platform for Private Equity, Real Estate, Mutual Funds, and Alternatives; build and maintain Spring Boot APIs and batch workflows with an emphasis on correctness, auditability, and production reliability.
- Reverse-engineered a legacy product processor and rebuilt it from scratch, owning design, coding, Kafka event flows, and config/certificate management, with downstream integrations (Apigee, NGINX); **deployed to production**.
- Resolved critical production incidents across distributed systems by debugging code, analyzing logs, and stabilizing Kafka event pipelines.
- Own monthly production releases (Jenkins/GitHub CI/CD, automated testing); use AI coding tools (Claude, Copilot) daily for development and code review.
- Migrated services and batch jobs from **Java 8 to Java 17** and refactored tightly coupled APIs.

iOS Swift Developer
Jul 2022 – Jun 2023

Citibank • Pune, India

- Built the **Wealth page** from scratch in SwiftUI for the CitiGold iOS app (clients with $25M+ net worth); integrated it with the backend team's APIs to meet design constraints and tested it across iPhone models, adapting layout constraints to each screen ratio.
- Integrated client authentication into the CitiGold iOS app with the backend team, so clients could securely access their accounts.
- Designed investment portfolio screens for APAC mobile banking apps in SwiftUI, with real-time financial data integrations.

ADVISORY

AI Technical Advisor
Aug 2026 – Present

Sanbav Technologies (CareAmy)

- Advising on CareAmy, a hospital management system with a version already in production at EU clinics; taking its AI document-summarization feature from proof of concept to production-grade code, with guardrails and error handling.
- Working on replacing the token-based third-party LLM API with self-hosted open-source models that can also run locally.

PROJECTS

Proposal Evaluator

Personal Project

- Built and deployed (live demo) a full-stack Next.js/TypeScript app on Postgres (Prisma) with Auth.js role-based access enforced server-side; users upload proposals, an LLM extracts and scores them against a rubric, and results show per-criterion means and confidence intervals over repeated runs.
- Wrote a dependency-free statistics module (t-intervals, bootstrap, Spearman, ICC) checked against SciPy/pingouin to 9 decimal places, plus ranking, prompt-injection and perturbation checks on synthetic proposals.
- Added prompt-injection defenses, Zod-validated LLM output with retries, and per-user and global cost caps.

Vuphf – Pet Community App

Lead Developer • Startup Project

- Led development of a Flutter app on Firebase (Firestore) with a posts feed and real-time messaging; built user accounts, role-based access control, and Google/Facebook sign-in, including fetching profile data from both providers.

Elicitation Ablation on UK AISI's Cybench Benchmark

Independent Project

- Built an evaluation pipeline (Inspect AI) across 9 tasks / 6 categories, varying prompt guidance and tool access to separate genuine capability limits from harness artifacts; ran and analyzed 112 samples with explicit confidence intervals rather than reporting raw pass rates.

Sandbagging Detection: Evaluation Infrastructure & Statistical Pipeline

Independent Project

- Built reusable evaluation infrastructure in Inspect AI: custom scorers, a chi-squared statistical analysis pipeline, and a model-imitation control; extended a published result from small open models to a frontier closed model, catching and correcting two methodological bugs along the way by re-testing against an independent reference model.

SKILLS

Languages & Front-end	Java · Python · SQL · TypeScript · Swift · Angular · Next.js · React · Flutter
Backend & Data	Spring Boot · Spring Batch · RESTful APIs · Microservices · Kafka · FastAPI · Flask
Databases	Oracle DB · SQL · PostgreSQL · Prisma · MongoDB · Firebase/Firestore
DevOps & Infra	Git & GitHub · Jenkins · Lightspeed · CI/CD · Docker · AWS · OpenShift · Harness · JIRA
Evaluation / ML	Inspect AI · Statistical Analysis · PyTorch · TensorFlow · NLP

RESEARCH & TRAINING

AISI Fellowship, Georgia Tech — 2025 – 2026

Multi-agent bystander-effect study

Built evaluation infrastructure and scenario-generation pipeline (2000+ scenarios) for a multi-agent behavioral study; statistical analysis via ANOVA / chi-squared.

BlueDot Impact — 2024

AI Safety Fundamentals

Six-week technical alignment & governance course.

SERI MATS Workshop — 2023

Agent Foundations, w/ John Wentworth

Six-week research workshop; replicated a Hessian/basin-volume model.

GCRI Research Fellowship — 2021

w/ Seth Baum

6-month research collaboration on AI risk transfer techniques.

EDUCATION

B.Tech, Mechanical Engineering — Jul 2018 – Apr 2022

NIT Karnataka

CGPA: 7.61 | Minor: Electronics & Communication Engineering
